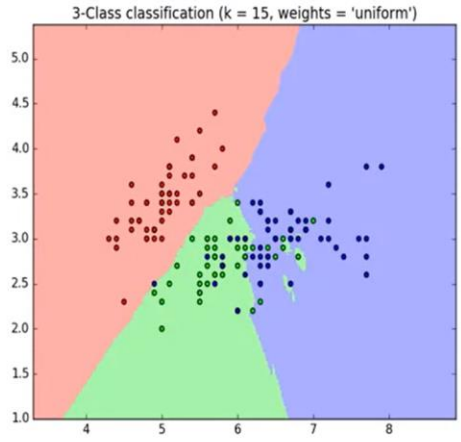
Supervised vs unsupervised learning

Supervised vs Unsupervised

IBM Developer SKILLS NETWORK

What is supervised learning?



We "teach the model," then with that knowledge, it can predict unknown or future instances.

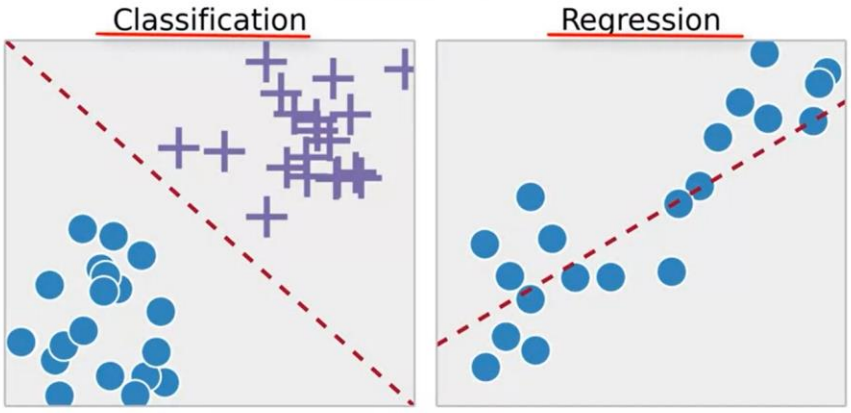
Types of supervised learning



What is classification?

Classification is the process of predicting discrete class labels or categories.

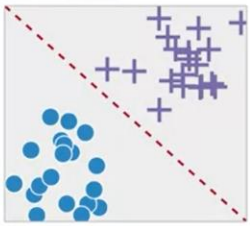
Categorical Values



What is regression?

Regression is the process of predicting continuous values.

Unsupervised learning techniques:

- Dimension reduction
- Density estimation
- Market basket analysis
- Clustering

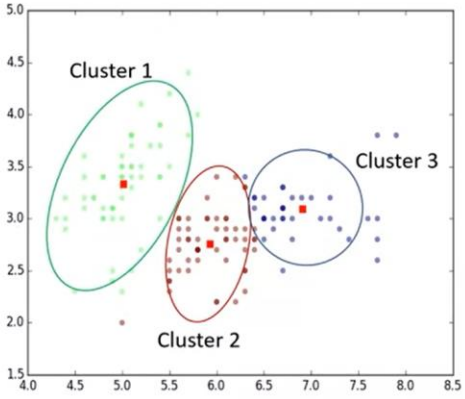
ALL OF THIS DATA IS UNLABELED

The model works on its own to discover information.

What is clustering?

Clustering is grouping of data points or objects that are somehow similar by:

- Discovering structure
- Summarization
- Anomaly detection



Supervised vs unsupervised learning

Supervised Learning

- **Classification:**
  Classifies labeled data
- **Regression:**
  Predicts trends using previous labeled data
- Has more evaluation methods than unsupervised learning
- Controlled environment

Unsupervised Learning

- **Clustering:**
  Finds patterns and groupings from unlabeled data
- Has fewer evaluation methods than supervised learning
- Less controlled environment
